Abstract

This project aims to develop a Student Assessment platform, in order to help teachers and other Academic Personel to reach out to any information about any lesson, and to report these lessons, with ease.

Solution

With the help of ASAP, teachers can fill In the information of their courses, can store it inside our database and they also can turn these Excel sheets into more advanced reports if they want to, when they need to, while authorized personnel can enter new lessons to the system.

Result&Conclucion

ASAP aims to help the lecturers and other academic personnel. We developed our applicant with the aim of lending a helping hand in storing the lesson information as well as, helping teachers to report these values, when needed.

Introduction

ASAP is a Desktop application designed to help keep records of the opened lessons, and to report them to the personnel in need when the time comes.
We believe that this application can save Academic personnel a lot of time.

Acknowledgement

We would like to thank our advisor Ahmet Coşar for his assistance and guidance for this important project.
